

## Handout for sections 9.1, 9.2, & 9.3

① Remember the relation between the solutions of  $ax^2+bx+c \equiv 0 \pmod{p}$  and  $y^2 \equiv d \pmod{p}$ ,  
where  $y = 2ax+b$  &  $d = b^2 - 4ac$

② Does  $x^2 \equiv 7 \pmod{31}$  have a soln.?

i.e., is 7 a quad. residue of 31? i.e., check  $7^{15} \equiv 1 \pmod{31}$ ?

$$7^2 \equiv 49 \equiv 18 \pmod{31}, \quad 7^4 \equiv 18^2 \equiv 324 \equiv 14 \pmod{31},$$

$$7^8 \equiv 14^2 \equiv 196 \equiv 10 \pmod{31}, \quad 7^{16} \equiv 10^2 \equiv 100 \equiv 7 \pmod{31}$$

Since, 7 & 31 are coprime, we get  $7^{15} \equiv 1 \pmod{31}$ .

So, a soln. exists & since  $(7^8)^2 \equiv 7 \pmod{31}$ ,  $x \equiv 7^8$  is a soln.,  
~~soln.~~  $x \equiv 7^8 \equiv 10 \pmod{31}$ , so  $x \equiv 10 \pmod{31}$  is a soln.

The second soln. is  $x \equiv 21 \pmod{31}$  ( $\because 21 = 31 - 10$ ).

③ Does  $x^2 \equiv 85 \pmod{97}$  have soln.? i.e., find  $(85/97)$ .

$$(85/97) = (-12/97) = (-1/97) (4/97) (3/97)$$

since  $85 \equiv -12 \pmod{97}$  By Multiplicativity

$$= (-1/97) (3/97) = 1$$

since  $4 = 2^2$

$$(-1/97) = (-1)^{\frac{97-1}{2}} = (-1)^{48} = 1$$

$$(3/97) = (97/3) = (1/3) = 1$$

By QRL

since  $97 \equiv 1 \pmod{4}$

since  $-97 \equiv 1 \pmod{3}$

So, soln. exists.

④ Solve  $3x^2 + 9x + 7 \equiv 0 \pmod{13}$

This is the same as  $y^2 \equiv 10 \pmod{13}$  where  $y \equiv 6x + 9 \pmod{13}$

Clearly,  $y \equiv \pm 6 \pmod{13}$  is the solutions.

So,  $6x + 9 \equiv 6 \pmod{13}$  &  $6x + 9 \equiv -6 \pmod{13}$  give the solns for  $x$ .

$$6x \equiv -3 \pmod{13} \text{ gives } x \equiv 6 \pmod{13}, \text{ by EA or Blanketship}$$

$$6x \equiv -15 \pmod{13} \text{ gives } x \equiv 4 \pmod{13}, \text{ by } \text{---} n \text{---}$$

$$\textcircled{5} (19/23) = (-4/23) = (4/23) (-1/23) = 1 \cdot (-1) = -1$$

$$(-23/59) = (36/59) = (6^2/59) = 1$$

$$\left(\frac{53}{20}\right) = \left(\frac{39}{20}\right) = \left(\frac{9}{20}\right) = 1$$

②

$$\left(\frac{10}{53}\right) = \left(-11/53\right) = \left(\frac{11}{53}\right) (-1/53) = 1 \cdot (-1) = -1$$

$$10 \equiv -12 \pmod{13} \text{ since } 12 \equiv 1 \pmod{13}$$

⑦ Find  $\left(\frac{7}{13}\right)$  using Gauss Lemma.

$$\frac{13-1}{2} = 6 \text{ so, } S = \{7, 14, 21, 28, 35, 42\}$$

$$\text{modulo } 13, \quad 7 \equiv 7, 14 \equiv 1, 21 \equiv 8, 28 \equiv 2, 35 \equiv 9, 42 \equiv 3$$

Out of which: 7, 8, and 9 are larger than 6.5

$$\therefore \left(\frac{7}{13}\right) = (-1)^3 = -1$$

⑧ Using QRL,  $\left(\frac{-219}{383}\right) = \left(\frac{-1}{383}\right) \left(\frac{3}{383}\right) \left(\frac{73}{383}\right)$

$$= (-1) (1) \left(\frac{383}{73}\right)$$

$$\text{You should be able to justify all the steps } = -(18/73) = -(9/73) (2/73) = -(1)(1) = -1$$
